CY'S EDITORIAL

WELCOME TO A NEW CHAPTER OF INNOVATION IN THE 52ND EDITION OF CONNECT MAGAZINE!

A new year always brings with it a renewed sense of purpose — and 2026 feels especially promising. Around us, technology continues to evolve at lightning speed, breaking barriers and shaping a more connected, intelligent world. Yet, true progress happens when these connections spark ideas, inspire collaboration, and make life better for people everywhere.

That's what this edition's theme, **'Wired for Progress: Connecting Ideas, Powering Possibilities,'** is all about — harnessing innovation not just to move faster, but to move forward together.

At element14, we take pride in being the bridge that brings great ideas to life — from the engineer designing tomorrow's solutions to the maker testing the limits of creativity. In this issue, you'll discover the latest from our partners **Multicomp Pro, Analog Devices (ADI)**, and the **element14 Community**, alongside a showcase of our **best-performing products in ANZ**. Each story, tool, and insight is designed to help you push boundaries and achieve more with confidence.

As we look ahead, let's stay wired for progress — connected by curiosity, driven by innovation, and united by the belief that when ideas meet opportunity, the possibilities are endless.

Warm regards,

CY Chan
Vice President, Sales and Service, APAC

Wired for Progress: Empowering Embedded Design

Engineers are shaping the future, and 'Wired for Progress' brings together the latest insights, project ideas, and methodological advances in embedded system development, ensuring every reader is equipped to connect ideas and power new possibilities in technology.

An effective embedded design process is central to successful product engineering. As hardware and software continue to increase, modern development kits are indispensable tools for engineers, accelerating prototyping and enabling scalable production-ready solutions. Engineers purchasing development kits value the software provided, and they actively seek kits that align with their application. Selecting optimal microcontroller platforms and integrating key components like sensors, PCBs, power supplies, and communication modules creates a robust foundation for innovation.

Beyond Prototyping: How Development Kits Are Reshaping Product Design

Development kits, once seen as just a springboard for proof-of-concept, are now redefining how engineers bring complex products to life, faster and smarter. They have evolved from basic prototyping tools into full-featured platforms that accelerate product innovation across industries. Whether you're designing for industrial automation, smart home, medical, or automotive markets, today's dev kits empower engineers to go beyond proof-of-concept, enabling rapid testing, scalable development, and seamless integration with real-world systems.

The design journey encompasses several critical phases, including requirement analysis, system architecture, prototyping, firmware integration, testing and compliance, iterative development, deployment and production, and support and maintenance.

Choosing the Right Development Kit

Development boards are essential tools for engineers and makers, facilitating the efficient utilisation and testing of cutting-edge technologies in IoT projects. They serve as critical building blocks for prototyping, experimentation, and the development of

innovative solutions that extend beyond traditional technology boundaries. These boards include firmware and provide access to exposed essential hardware, along with accessible input/output (I/O) pins, allowing for customisation and interaction. Users can build custom circuitry and modify firmware according to their product specifications, enhancing the versatility and functionality of their projects.

Common communication protocols supported on most of the development kits include the Inter-Integrated Circuit (I2C) protocol, which sends data in packets over short distances. Another is the Serial Peripheral Interface (SPI) protocol, used for short-distance communication but sends a stream of data continuously rather than sending packets. Various wireless technologies available for interconnecting IoT devices with the internet. Among the most commonly used are Wi-Fi, Bluetooth (BLE), Infrared (IR), Zigbee, Near Field Communication (NFC), Radio Frequency Identification (RFID) and Satellite communication (GSM, GPRS / GSM, 3G, 4G / LTE, 5G, and others). The choice of technology depends on factors such as range requirements, data rates, power consumption, cost, and specific application needs.

Development Kit Headquarters (DevKit HQ) - One-Stop Space for Embedded Evaluation Boards, Development Kits, and SBCs

element14 has launched its DevKit HQ, a new and unique online resource that brings together evaluation boards, development kits, tools and technical documents in one place. It provides a single destination to discover, compare and select application and technology solutions from leading semiconductor and hardware suppliers. The site emphasizes modular, configurable products with standard interfaces, while also offering overviews of featured development kits, datasheets, application notes, reference

designs as well as additional design resources. These resources help engineers accelerate design decisions and innovation across various applications, including AI, IoT, sensors, wireless, motor control, and power management.

The portal features a user-friendly interface that enables users to search and explore an extensive selection of development kits, with particular focus on offerings from notable manufacturers such as Analog Devices, AMD, Arduino, Beagleboard, Infineon, Microchip, NXP, Raspberry Pi, Renesas, STMicroelectronics and more, for AI/ML, IoT, sensors, wireless, motor control, and power management. Making it easy to discover, compare, and accelerate your embedded design and innovation.

Key benefits of using DevKitHQ include accelerated development cycles, simplified component selection, reduced design complexity and risk, access to resources, shorter time to market, and cost efficiency.

From Concept to Production

a. STMicroelectronics provides a comprehensive embedded development ecosystem focused on the STM32 and STM32MP1 platforms. This ecosystem supports a wide range of applications, including ultra-low-power wearables, industrial AI solutions, and connected edge nodes. The development kits offered by ST merge high performance with flexibility while ensuring strong software support for developers.

STM32 Range

STM32 Nucleo Boards, STM32 Discovery Kits, STM32H7 and STM32H5 Series, STM32U5 Series, STM32MP1 MPU Series.

b. NXP Semiconductors provides a comprehensive range of development kits designed for multiple applications, including edge artificial intelligence (AI) and real-time industrial automation. Their offerings range from high-performance application processors to energy-efficient microcontrollers (MCUs), facilitating various edge processing and secure control solutions on scalable platforms.

NXP i.MX, MCX and Freedom Platform Range

i.MX 8M Plus EVK, i.MX 9 EVK, i.MX RT1060 EVK, MCX N Series Kits, Freedom Development Platforms

c. Microchip Technology Inc. provides a variety of development kits for its SAM, AVR, PIC, and dsPIC families, supported by tools such as MPLAB X IDE, Harmony Framework, and Atmel START. These kits facilitate rapid prototyping and offer ongoing support across automotive, industrial, and IoT sectors.

Microchip Curiosity, AVR and SAM Range

Curiosity Nano Boards, SAM E70 and S70 Xplained Kits, dsPIC33CH Curiosity Development Board, AVR-IoT Cellular and Wi-Fi Dev Boards, PIC32MX and PIC32MZ Curiosity Boards

d. AMD's embedded development platforms provide exceptional performance for real-time AI, machine vision, and control applications. Following its acquisition of Xilinx, AMD now offers the Versal™, Kria™, and Zynq UltraScale+™ families, which combine programmable logic with ARM-based processing.

Platforms include

Kria KV260 Vision AI Starter Kit, Versal AI Edge Kits, Zynq UltraScale+ MPSoC Kits, Ryzen Embedded V3000

e. Raspberry Pi has evolved from a hobbyist platform to an industrial automation and edge computing foundation, exemplified by its Compute Module 5 (CM5), Raspberry Pi 5 and Pico 2, which provide scalable, production-ready hardware with long-term availability, extensive I/O options, and strong community support.

Raspberry Pi Full Ecosystem

Raspberry Pi 5 and Pico 2, which provide scalable, production-ready hardware with long-term availability, extensive I/O options, and strong community support

f. Arduino's ecosystem has expanded to include professional-grade development platforms such as Portenta, Nicla, and MKR. These combine the user-friendly Arduino IDE with robust industrial features, making them suitable for applications in logistics, environmental sensing, and edge computing.

Arduino Portenta, MKR and Nano Range

Arduino's ecosystem has expanded to include professional-grade development platforms such as Portenta, Nicla, and MKR.

Conclusion

The collaboration between hardware and software is crucial as embedded systems evolve, fostering intelligent and efficient technology to drive future innovation, aligning with the theme "Wired for Progress." Development kits serve as comprehensive ecosystems rather than just prototyping tools, facilitating scalable and high-performance solutions across various sectors like AI, IoT, and edge computing. Resources such as DevKit HQ provide access to advanced technology, simplifying complexity and accelerating time-to-market.

WIRED FOR PROGRESS
CONNECTING IDEAS, POWERING POSSIBILITIES

As we welcome the New Year, we want to take a moment to sincerely thank you for your trust and support. Your continued loyalty means everything to us, and we're truly grateful to have you as part of our journey.

The year ahead brings new opportunities, fresh ideas, and exciting plans, and we look forward to serving you even better. We remain committed to providing you with the quality, care, and value you deserve.

Wishing you a New Year filled with happiness, success, and prosperity. Thank you for being with us — we look forward to another great year together.

Warm regards,

Kiran Kaur

QUALITY AND VALUE
CABLE AND WIRE

At Multicomp Pro, we understand that engineers need cost-effective, reliable solutions without compromising on quality. That's why we offer a wide range of cable and wire products designed to meet the demands of diverse applications—often at prices up to 30% less than leading brands.

With a 4.6/5 star rating and trusted by Fortune Global 500 companies, Multicomp Pro delivers the performance you need at the value you expect.
